# Special models

## HIGH-LIFT HAND PALLET TRUCK

This hand pallet truck combines the manoeuvrability of a hand pallet truck and the lifting function of a lift table. The hydraulic pump which is operated by hand, is fitted with a valve to differentiate the lifting speed when the hand pallet truck is loaded or unloaded and it allows lifting of the forks up to 800 mm off the ground. In order to avoid the transport of loads at a height too far off the ground, this hand pallet truck is fitted with side stabilisers which come out automatically, when the forks are over 400 mm off the ground.

Capacity 1000 Kg (dimensions in mm)

Fork length	Overall length	Overall width	Width between the forks	Fork width	Fork height	Lifting stroke
1120	1495	530	210	160	85	800

## STAINLESS STEEL MODEL

This hand pallet truck is completely made of stainless steel AISI 304. It is equipped with quick lift pump, nylon wheels and rollers and bearings of stainless steel. This model is resistant to aggressive chemical agents and meets the hygiene rules of the food industry.

Capacity 2.200 Kg (dimensions in mm)

Fork length	Overall width	Width between the forks	Fork width	Fork height	Lifting stroke
1120-950-800	530	210	160	85	205

## 3 TON MODEL

This model is characterised by a strong frame strengthened in the high stress points. It is fitted with a normal pump which is suitable to lift 3000 Kg. Poliurethane wheels and tandem rollers are fitted as standard.

Capacity 2.200 Kg (dimensions in mm)

Fork length	Overall width	Fork height	Lifting stroke
1120-950-800	530	55	160

Other special dimensions on request available (see price-list)

## LOW PROFILE H55 MODEL

This hand pallet truck is designed to pick up low pallets. It is fitted with quick lift pump, rubber steering wheels and nylon tandem rollers diam. 55 mm.

## MODEL FITTED WITH BRAKE

The use of this HPT is increasing more and more due to the new rules for safety and prevention of injuries. The brake is applied by a lever on the tiller on the left side of the operator actuating the brake on the steering wheels. This lever has different positions which allow both the braking and/or the slowing down of the pallets truck. The max. capacity of this model is 2200 Kg. It is particularly suitable for environments with slopes or for trucks fitted with hydraulic driven loading platforms.

**CE** Bolzoni Auramo handpallettrucks are marked CE and are produced in conformity to the C.E. Directives (98/37/CE) as well as to Rules EN 1757-2.

## SPECIAL LENGTHS AND WIDTHS

Special models with longer/shorter forks and/or wider frames with different capacities are also available. On request galvanised models are also available. For further information please call Bolzoni Auramo.
